Hybrid Electric Vehicle
Technology provides

foundational information
about vehicles that use
more than one propulsion

technology to power a drive system. This textbook is filled with technical illustrations and concise descriptions of the different configurations and vehicle platforms, the operation of various systems and the technologies involved, and the maintenance of hybrid electric vehicles. Safety precautions required used when working around high-voltage vehicle systems, especially in emergencies, are highlighted.

Governments have done much to leverage information technology to deploy e-government services, but much work remains before the vision of e-government can be fully realized. Information Technology Research, Innovation, and E-government examines the emerging visions for e-government, the technologies required to implement them, and approaches that can be taken to accelerate innovation and the transition of innovative

information technologies from the laboratory to operational government systems. In many cases, government can follow the private sector in designing and implementing IT-based services. But there are a number of areas where government requirements differ from those in the commercial world, and in these areas government will need to act on its role as a "demand leader." Although researchers and government agencies may appear to be unlikely allies in this endeavor,

both groups have a shared interest in innovation and meeting future needs. E-government innovation will require addressing a broad array of issues, including organization and policy as well as engineering practice and technology research and development, and each of these issues is considered in the book.

The Book of Jasher, a lost book of the Bible

comprising ninety-one chapters, is presented here complete in the celebrated 1840 English translation by Moses Samuel. Referenced twice in the New Testament scripture - once in Joshua and once in Second Samuel - the Book of Jasher is also known as the Sefer haYashar or the Book of the Upright. Its contents are wide-ranging; the creation of Man and the story of Adam and Eve, and the descendants of Noah comprise part of the text. The testing of Abraham by

God also features, while Abraham's dialogue is notably expanded far beyond what is said in the Hebrew Bible. The text has gained a great following since its translation to English in the mid-19th century. The Church of Latter-Day Saints founder Joseph Smith praised its detail, noting the book's elaboration on the condition of the Earth following the Great Flood. *The Book of Jasher: The 'book of the Upright' - Bible Pseudepigrapha and Apocrypha (Hardcover)*

Physical Sciences for NGSS has been specifically written to meet the requirements of the Next Generation Science Standards (NGSS)

for High School Physical Sciences (HS-PS). It encompasses all three dimensions of the standards (science and engineering practices, crosscutting concepts, and disciplinary core ideas), addressing the program content through a wide range of engaging student-focused activities and investigations. Through completion of these activities, students build a sound understanding of science and engineering practices, recognize and understand the concepts

that link all domains of science, and build the knowledge base required to integrate the three dimensions of the standards to meet the program's performance expectations.

Marxist aesthetic thought has dominated Chinese literary life for half a century, but little is known about how this distinctive Western school of thought came to be accepted. Paul G. Pickowicz fills in the gap,

tracing the evolution of Chinese Marxist literary thought by focusing on Ch'u Ch'iu-pai, China's most important Marxist literary intellectual of the twenties and thirties. Ch'u and his contemporaries interpreted the writing of Marx, Engels, Plekhanov, Lafargue, Trotsky, Lenin, and Lunacharsky in ways that would answer important questions about the relationship between art and society, the moral obligations of the writer, the manner in which revolutionaries should perceive the literary

treasures of the past, the impact of capitalism on artistic culture, and the nature of art in the socialist society of the future. Paul G. Pickowicz finds that Chinese writers responded to Marxism in a variety of ways. Some stressed voluntaristic themes, some emphasized deterministic elements, others, like Ch'u, attempted to synthesize conflicting strains. Moreover, the transition to Marxism did not constitute a radical break from the liberal traditions associated with

the May Fourth literary revolution. Instead, leftist writers interpreted Marxism in ways that were compatible with their deeply ingrained May Fourth intellectual predispositions. Ch'u was the first to make a Marxist critique of the May Fourth generation of literary intellectuals and to analyze the failings of the leftist literary movement itself. His writings are of contemporary relevance for the issues he raised, such as the failure of leftist writers to place the revolutionary literary

movement on a mass base. Ch'u's writings influenced the literary thought of Mao Tse-tung, and the issues Ch'u raised continue to be debated with emotion in China today. Pollutants, Human Health and the Environment is a comprehensive, up-to-date overview of environmental pollutants

that are of current concern to human health. Clearly structured throughout, the main body of the book is divided by pollutant type with a chapter devoted to each group of pollutants. Each chapter follows a similar format to facilitate comparison and discussion. For each pollutant, the authors describe the sources, pathways, environmental fate and sinks as well as known toxicological effects. Importantly, the second chapter on heavy metals and other

inorganic substances deals with trace element deficiencies which can have serious problems for human health. Some rocks and soils are naturally low in some trace elements and intensive agriculture over the past half century has effectively mined many trace elements reducing their levels in soils and crops. The final chapter is a discussion about the various risk assessment frameworks and regulations covering the main pollutants. Comprehensive, up-to-

date coverage of environmental pollutants of concern to human health Clearly divided into pollutant type with each chapter devoted to a different pollutant group Clearly structured throughout with the same format for each chapter to help facilitate comparison and discussion and enable readers to prioritise chemicals of concern Description of the sources, pathways, environmental fate and known toxicological effect Includes contributions from leading researchers

confront and overcome hurdles-be they political, personal, or social-made her one of the greatest leaders of the last century, if not all time. In *Leadership the Eleanor Roosevelt Way*, author and scholar Robin Gerber examines the values, tactics, and beliefs that enabled Eleanor Roosevelt to bring about tremendous change-in herself and in the world. Examining the former first lady's rise from a difficult childhood to her enormously productive and politically involved

years in the White House, as a U.N. delegate and an honorary ambassador, an author, and beyond, Gerber offers women an inspiring road map to heroic living and an unparalleled model for personal achievement. *The Human Face of Big Data* Macmillan This paper describes economic developments in Grenada during the 1990s. The weak growth performance since 1990 reflected largely a continuous contraction in agricultural output, which declined each year from

1989 to 1993. The construction industry experienced a major contraction in 1992 owing to the sharp fall in public investment. In 1993, output declined in the mining and quarrying, construction, and manufacturing sectors as well as in agriculture. In contrast, the hotel and restaurant sector has exhibited strong growth since the late 1980s, with real value added growing by 13.8 percent, on average, each year since 1989.

The rollicking sequel to Fortune's Pawn -- an

action packed science fiction novel. Devi Morris has a lot of problems. And not the fun, easy-to-shoot kind either. After a mysterious attack left her short several memories and one partner, she's determined to keep her head down, do her job, and get on with her life. But even though Devi's not actually looking for it - trouble keeps finding her. She sees things no one else can, the black stain on her hands is growing, and she is entangled with the cook she's supposed to hate.

But when a deadly crisis exposes far more of the truth than she bargained for, Devi discovers there's worse fates than being shot, and sometimes the only people you can trust are the ones who want you dead.

Before you can influence decisions, you need to understand what drives them. In *The Choice Factory*, Richard Shotton sets out to help you learn. By observing a typical day of decision-making, from trivial food choices to significant work-place moves, he investigates how our behaviour is shaped by psychological shortcuts. With a clear focus on the marketing potential of knowing what

makes us tick, Shotton has drawn on evidence from academia, real-life ad campaigns and his own original research. *The Choice Factory* is written in an entertaining and highly-accessible format, with 25 short chapters, each addressing a cognitive bias and outlining simple ways to apply it to your own marketing challenges. Supporting his discussion, Shotton adds insights from new interviews with some of the smartest thinkers in advertising, including Rory Sutherland,

Lucy Jameson and Mark Earls. From priming to the pratfall effect, charm pricing to the curse of knowledge, the science of behavioural economics has never been easier to apply to marketing. *The Choice Factory* is the new advertising essential.

This inquiry concerns the scope for greater production and use of new and advanced materials based on metals, ceramics, polymers and

composites of these materials. A core issue is whether Australian industry is exploiting the growth opportunities that the materials provide to increase the output of high value added products and exports - both by producing new and advanced materials from raw materials, and by incorporating them into products.
