This book is a compilation of very personal approaches to mentoring and sponsoring, breaking the stereotypes of seniority, age or experience. The authors have provided a platform to understand that mentoring and especially sponsoring are in fact a win-win relation, in which both sides, mentors and mentees; and sponsors and sponsored individuals learn from each other, enhancing their career paths. How they managed to create a growth space for themselves and their teams through mentoring and sponsoring, is a story of professional leadership. They shared a privileged outlook to understand the root causes of barriers, as well as to envision plausible solutions for difficult career crossroads, in which mentorship or sponsoring was key to steer step changes. The authors propose not only their vision, but a remarkable collection of unfiltered interviews with young and renown professionals in many sectors, from photography to music, research, sports, energy, and more, completing a vision of what is key for both sides of the equation pertinent to mentoring

and sponsoring: the givers and the receivers. They explain what is needed to gain the most out of the mentoring and sponsoring loops, with their own career stories. Success is supported by many factors, in which the most important are the technical competency and performance aligned with resilience. However, in the long path of a career, mentors and particularly sponsors play a foundational and frequently a changing-life role, improving our perspective or triggering reflections and actions that benefitted our journeys at work and in life. This book provides insights on what works for an effective mentoring and sponsoring process. It is useful for all professionals, especially those starting their career journeys.

The availability of energy affects every aspect of our lives, from driving to electricity and computer function. Coding is crucial to energy creation and distribution. It plays a vital role in locating new sources of traditional fossil fuels, building alternative energy systems, evaluating the impact of new energy systems on the environment, and creating smart grids to distribute energy efficiently. This book explains the opportunities for coders in the energy industry today and in the future, and provides insight into what it is like to work on software development in the energy field. It provides students with guidance on courses to take in high school and beyond, and offers advice on how to obtain a job as a coder in the energy industry.

Praise for the previous edition: "... highly recommended for high school, public, and academic libraries."

**Coding Careers in the Energy Industry** DIANE Publishing Formulas and Calculations for Drilling, Production, and Workover: All the Formulas You Need to Solve Drilling and Production Problems, Third Edition, provides a convenient source of reference for oil field workers who do not use formulas and calculations on a regular basis. This book is still intended for the entirety of their careers. It also aims to help reduce the volume of materials they must carry to the rig floor or job site. Starting with review of basic equations and basic calculations, the remaining chapters offer in-depth discussions of topics such as drilling fluids, pressure control, engineering calculations, and air and gas calculations. The formulas and calculations are provided in either English field units or in metric units. This edition includes the Volumetric Procedure, the Lubricate and Bleed Procedure (both Volume and Pressure Methods), and stripping procedures (both the Strip and Bleed Procedure and the Combined Stripping and Volumetric Procedure). The Table of Contents and the Index make looking up formulas and calculations quick and easy. Examples are used throughout to make the formulas as easy as possible to understand and work, and often exact words are used rather than symbols. Back-of-the-envelope calculations that save time and money Easily evaluate the performance of your well Confidently design or redesign operations that will improve production Handle special production projects with ease

This book discusses the major challenges facing dual-career

couples—a substantial proportion of modern society—and suggests ways for both individuals to achieve career success by re-evaluating traditional styles of working and focusing on productivity, flexibility, and negotiating win-win solutions. • Identifies and explains the simple principles that enable readers to understand the power in relationships—with their mate and with their employer—and grasp the true sources of their motivation • Supplies insights based on surveys of more than 10,000 professionals and more than three decades of business-world experience • Addresses "dual-career" issues in the context of being a form of invisible diversity—a reality that impacts both men and women but tends to disproportionately negatively impact women, who are also struggling with unconscious gender bias • Reveals how dissatisfaction with work-life balance is often caused by lack of career opportunities

**Exploring Tech Careers, Fourth Edition, 2-Volume Set** The Princeton Review

Energy Technology and Directions for the Future presents the fundamentals of energy for scientists and engineers. It is a survey of energy sources that will be available for use in the 21st century energy mix. The reader will learn about the history and science of several energy sources as well as the technology and social significance of energy. Themes in the book include thermodynamics, electricity distribution, geothermal energy, fossil fuels, solar energy, nuclear energy, alternate energy (wind, water, biomass), energy and society, energy and the environment, sustainable development, the hydrogen economy, and energy forecasting. The approach is designed to present an intellectually rich and interesting text that is also practical. This is accomplished by introducing basic concepts in the context of energy technologies and, where appropriate, in historical context. Scientific concepts are used to solve concrete engineering problems. The technical level of presentation presumes that readers have completed college level physics with calculus and mathematics through calculus of several variables. The selection of topics is designed to provide the reader with an introduction to the language, concepts and techniques used in all major energy components that are expected to contribute to the 21st century energy mix. Future energy professionals will need to understand the origin and interactions of these energy components to thrive in an energy industry that is evolving from an industry dominated by fossil fuels to an industry working with many energy sources. Presents the fundamentals of energy production for engineers, scientists, engineering professors, students, and anyone in the field who needs a technical discussion of energy topics. Provides engineers with a valuable expanded knowledge base using the U.S. National Academy of Sciences content standards. Examines the energy options for the twenty-first century as older energy sources quickly become depleted.

*Energy Technology and Directions for the Future* Rowman & Littlefield

In an increasingly technological world, the education of scientists and engineers has become an activity of growing importance. *Educating Scientists and Engineers for Academic and Non-Academic Career Success* focuses on the structure of the current educational system and describes the transformations needed to ensure the adequate education of future science and engineering students. The book describes how university faculty can make the necessary changes to teach a broader range of skills, technical proficiency, teamwork, adaptability, and versatility within the undergraduate and postgraduate curriculum. Also covered are approaches to provide a broader exposure to experiences desired by both academic and non-university employers to prepare students for an increasingly interdisciplinary, collaborative, and global job market.

*The A-Z of Careers and Jobs* Rowman & Littlefield Publishers

This book reports the results of a three-year research program

funded by the National Science Foundation which targeted students and teachers from four Detroit high schools in order for them to learn, experience, and use IT within the context of STEM (IT/STEM), and explore 21st century career and educational pathways. The book discusses the accomplishment of these goals through the creation of a Community of Designers-- an environment in which high school students and teachers, undergraduate/graduate student assistants, and STEM area faculty and industry experts worked together as a cohesive team. The program created four project-based design teams, one for

each STEM area. Each team had access to two year-round IT/STEM enrichment experiences to create high-quality learning projects, strategies, and curriculum models. These strategies were applied in after school, weekend, and summer settings through hands-on, inquiry-based activities with a strong emphasis on non-traditional approaches to learning and understanding. The book represents the first comprehensive description and analysis of the research program and suggests a plan for future development and refinement.
